Meth-Lab Neutralizer-Acidic

Designed to neutralize acid-based chemicals used in clandestine drug laboratories.

Digests the methamphetamine-based components into non-toxic, substances.

Special binding agents encapsulate metals and phosphorous-based chemicals eliminating toxic hazards.

640 Fl. Oz.(5 Gal.) 18.9 L

Meth-Lab Neutralizer-Acidic™ easily neutralizes hydrochloric acid (HCL) and acidic-based chemicals used in methamphetamine production. The acidic chemicals are transformed into non-toxic and non-hazardous organic salts and water.

pH indicators change colors in the presence of acidic-based chemicals and return to the original color when chemicals are neutralized.

Directions: Test unknown chemical compounds for pH to determine which solution to use. Atomize product into the air and onto surfaces surrounding chemicals to be neutralized to reduce any vapors and initial odors. Surface Contamination: Gently pour and/or spray the product onto surfaces, drains or chemical containers. The product will change colors in the presence of acid or base. It will reverse the color change when the solution is neutralized. Wipe surfaces with a clean, damp cloth and allow to air dry. Soil Contamination: Apply products with pump-up sprayer until soil is completely saturated. Turn soil over to ensure complete coverage.

FIRST AID

If in eyes: Flush eyes for 15 minutes with cool, low pressure water. **If on skin:** Wash exposed areas with soap and water. **If ingested:** Seek medical attention. Do not induce vomiting. Drink 2 glasses of water.
